Errata for *Beginning Apache Struts: From Novice to Professional* by Arnold Doray

Critical Errors (7) :

1. On pages 28 and 30, the attribute "`font-color`" should instead be "`fontColor`".

2. On page 29 in the doAfterBody() method of Listing 4-4, "JSPWriter" should be "JspWriter":

   `JspWriter out = bc.getEnclosingWriter();`

3. On page 32 (Lab 4), the reference to the "CD-ROM" really means the Apress source code section.

4. On page 470, in the Answers for Chapter 3, Lab 3 (Scopes Quiz), the answer to the question "What if Brenda now loads Second.jsp directly?" for **session** scope should be **122** instead of 12122.

5. On page 438, third code example from the top the closing tag `</logic:empty>` should instead read `</logic:notEmpty>`.

6. In RegistrationAction.java file (found in registration.zip), the line :

   `request.setAttribute("model",model);`

   Should instead read:

   `request.setAttribute("registration-successful",model);`

   So that the name of the attribute matches the name used in the `<logic:Present>` and `<logic:notPresent>` tags in `index.jsp` of the Registration webapp.

7. In the **lab4-answers.zip** file, the taglib declaration in test.jsp is incorrect**.** It says:

   `<%@ taglib uri="/tags/lab3-converter" prefix="temp"%>`

   when it should be:

   `<%@ taglib uri="/tags/lab4-converter" prefix="temp"%>`

   (This bug has been corrected in the latest code download)

Non-Critical Errors (3):

1. On page 7 (Chapter 2), "WebLogic" should read "WebSphere".

2. On page 7 (Chapter 2), the sentence: "...you can develop Struts applications **with** having to know much about   servlets!" should read: "...you can develop Struts applications **<u>without</u>** having to know much about servlets!"

3. On page 31 in the sentence: "For example, these all convert **<u>to</u>** 100 Celsius to 212 Fahrenheit" should read: "For example, these all convert 100 Celsius to 212 Fahrenheit".

Clarifications (2):

1. You **can** use any JSDK greater than 1.4 for this book. The note on page 8 ("I'm assuming you installed the 1.4 JSDK") was merely to allow making concrete statements in the following paragraph. However, note that if you're using Tomcat 5.5.x+,you'll need JSDK 1.5.

2. Labs 6 - 8 are **not** meant to be **deployed**. You should only implement and compile (to test for Java errors). You first deploy LILLDEP during Lab 9a.

Kudos (6):

My sincere thanks to those who have reported bugs:

- Si Seng, Lim (CE1, CE5, CL2)
- Bill Fly (CE4)
- Martin Reynolds (CE2, NCE1-3)
- Jaco Adriaansen (CE4)
- Ben Logan (CE6)
- Gerry Sondreal (CE7)
